MCQMC
Warsaw 2010
The Problem

- \( D \subseteq \mathbb{R}^d \) Borel measurable
- \( \varrho \) probability density on \( D \)
- \( H \) Hilbert space of functions \( f : D \rightarrow \mathbb{R} \)
- Integration Problem:
  \[
  I(f) = \int_D f(x) \varrho(x) \, dx
  \]
- Problem is well defined iff \( H \subset L_1(\varrho) \) iff
  \[
  C^{\text{init}} = \left( \int_D \int_D K(x, y) \varrho(x) \varrho(y) \, dx \, dy \right)^{1/2} < \infty
  \]
- Algorithms: Randomized Algorithm using \( n \) function values, in particular importance sampling
- to have function values well defined we assume that \( H \) is a reproducing kernel Hilbert space with kernel \( K : D \times D \rightarrow \mathbb{R} \).
The Problem

- $D \subseteq \mathbb{R}^d$ Borel measurable
- $\varrho$ probability density on $D$
- $H$ Hilbert space of functions $f : D \rightarrow \mathbb{R}$

Integration Problem:

$$I(f) = \int_D f(x) \varrho(x) \, dx$$

Problem is well defined iff $H \subset L_1(\varrho)$ iff

$$C_{\text{init}} = \left( \int_D \int_D K(x, y) \varrho(x) \varrho(y) \, dx \, dy \right)^{1/2} < \infty$$

Algorithms: Randomized Algorithm using $n$ function values, in particular importance sampling

The Problem

- $D \subseteq \mathbb{R}^d$ Borel measurable
- $\varrho$ probability density on $D$
- $H$ Hilbert space of functions $f : D \to \mathbb{R}$
- **Integration Problem:**

$$I(f) = \int_D f(x)\varrho(x)\,dx$$

- Problem is well defined iff $H \subset L_1(\varrho)$ iff

$$C_{\text{init}} = \left(\int_D \int_D K(x, y)\varrho(x)\varrho(y)\,dxdy\right)^{1/2} < \infty$$

- **Algorithms:** Randomized Algorithm using $n$ function values, in particular importance sampling
- to have function values well defined we assume that $H$ is a reproducing kernel Hilbert space with kernel $K : D \times D \to \mathbb{R}$. 

Aicke Hinrichs  Optimal Importance Sampling 2 / 14
The Problem

- $D \subseteq \mathbb{R}^d$ Borel measurable
- $\varrho$ probability density on $D$
- $H$ Hilbert space of functions $f : D \to \mathbb{R}$

**Integration Problem:**

$$I(f) = \int_D f(x)\varrho(x)\,dx$$

- Problem is well defined iff $H \subset L_1(\varrho)$ iff

$$C^{\text{init}} = \left( \int_D \int_D K(x, y)\varrho(x)\varrho(y)\,dx\,dy \right)^{1/2} < \infty$$

**Algorithms:** Randomized Algorithm using $n$ function values, in particular importance sampling

- to have function values well defined we assume that $H$ is a reproducing kernel Hilbert space with kernel $K : D \times D \to \mathbb{R}$.
The Problem

- $D \subseteq \mathbb{R}^d$ Borel measurable
- $\varrho$ probability density on $D$
- $H$ Hilbert space of functions $f : D \rightarrow \mathbb{R}$
- **Integration Problem:**
  \[
  I(f) = \int_D f(x) \varrho(x) \, dx
  \]
- Problem is well defined iff $H \subseteq L_1(\varrho)$ iff
  \[
  C^{\text{init}} = \left( \int_D \int_D K(x, y) \varrho(x) \varrho(y) \, dx \, dy \right)^{1/2} < \infty
  \]
- **Algorithms:** Randomized Algorithm using $n$ function values, in particular importance sampling
- to have function values well defined we assume that $H$ is a reproducing kernel Hilbert space with kernel $K : D \times D \rightarrow \mathbb{R}$.
The Problem

- $D \subseteq \mathbb{R}^d$ Borel measurable
- $\varrho$ probability density on $D$
- $H$ Hilbert space of functions $f : D \rightarrow \mathbb{R}$

**Integration Problem:**

$$I(f) = \int_D f(x) \varrho(x) \, dx$$

Problem is well defined iff $H \subseteq L_1(\varrho)$ iff

$$C^{\text{init}} = \left( \int_D \int_D K(x, y) \varrho(x) \varrho(y) \, dx \, dy \right)^{1/2} < \infty$$

**Algorithms:** Randomized Algorithm using $n$ function values, in particular importance sampling

- to have function values well defined we assume that $H$ is a reproducing kernel Hilbert space with kernel $K : D \times D \rightarrow \mathbb{R}$.
The Problem

- $D \subseteq \mathbb{R}^d$ Borel measurable
- $\varrho$ probability density on $D$
- $H$ Hilbert space of functions $f : D \rightarrow \mathbb{R}$

**Integration Problem:**

$$I(f) = \int_D f(x) \varrho(x) \, dx$$

- Problem is well defined iff $H \subset L_1(\varrho)$ iff

$$C^{\text{init}} = \left( \int_D \int_D K(x, y) \varrho(x) \varrho(y) \, dx \, dy \right)^{1/2} < \infty$$

**Algorithms:** Randomized Algorithm using $n$ function values, in particular importance sampling

- to have function values well defined we assume that $H$ is a **reproducing kernel Hilbert space** with kernel $K : D \times D \rightarrow \mathbb{R}$.
Importance Sampling

- another density function $\omega$ on $D$

Alternative Integration Problem:

$$I(f) = \int_D \frac{f(x)\varrho(x)}{\omega(x)} \omega(x) \, dx$$

- Monte-Carlo: $x_1, \ldots, x_n$ iid according to probability density $\omega$

$$Q_n(f) = \frac{1}{n} \sum_{i=1}^n \frac{f(x_i)\varrho(x_i)}{\omega(x_i)}$$

- Error:

$$e_n^2 = \sup_{\|f\|_H \leq 1} \mathbb{E} \left| I(f) - Q_n(f) \right|^2$$

$$= \frac{1}{n} \sup_{\|f\|_H \leq 1} \left( \int_D \frac{f(x)^2\varrho(x)^2}{\omega(x)} \, dx - I(f)^2 \right)$$
Importance Sampling

- another density function $\omega$ on $D$

Alternative Integration Problem:

$$I(f) = \int_{D} \frac{f(x)\varrho(x)}{\omega(x)} \omega(x) \, dx$$

- Monte-Carlo: $x_1, \ldots, x_n$ iid according to probability density $\omega$

$$Q_n(f) = \frac{1}{n} \sum_{i=1}^{n} \frac{f(x_i)\varrho(x_i)}{\omega(x_i)}$$

- Error:

$$e_n^2 = \sup_{\|f\|_H \leq 1} \mathbb{E} |I(f) - Q_n(f)|^2$$

$$= \frac{1}{n} \sup_{\|f\|_H \leq 1} \left( \int_{D} \frac{f(x)^2\varrho(x)^2}{\omega(x)} \, dx - I(f)^2 \right)$$
Importance Sampling

- another density function $\omega$ on $D$

Alternative Integration Problem:

$$I(f) = \int_D \frac{f(x) \varrho(x)}{\omega(x)} \omega(x) \, dx$$

Monte-Carlo: $x_1, \ldots, x_n$ iid according to probability density $\omega$

$$Q_n(f) = \frac{1}{n} \sum_{i=1}^{n} \frac{f(x_i) \varrho(x_i)}{\omega(x_i)}$$

Error:

$$e_n^2 = \sup_{\|f\|_H \leq 1} \mathbb{E} \left| I(f) - Q_n(f) \right|^2$$

$$= \frac{1}{n} \sup_{\|f\|_H \leq 1} \left( \int_D \frac{f(x)^2 \varrho(x)^2}{\omega(x)} \, dx - I(f)^2 \right)$$
Importance Sampling

- another density function $\omega$ on $D$

**Alternative Integration Problem:**

$$I(f) = \int_D \frac{f(x) \varrho(x)}{\omega(x)} \omega(x) \, dx$$

- **Monte-Carlo:** $x_1, \ldots, x_n$ iid according to probability density $\omega$

$$Q_n(f) = \frac{1}{n} \sum_{i=1}^n \frac{f(x_i) \varrho(x_i)}{\omega(x_i)}$$

- **Error:**

$$e_n^2 = \sup_{\|f\|_H \leq 1} \mathbb{E} |I(f) - Q_n(f)|^2$$

$$= \frac{1}{n} \sup_{\|f\|_H \leq 1} \left( \int_D \frac{f(x)^2 \varrho(x)^2}{\omega(x)} \, dx - I(f)^2 \right)$$
Analysis of the error

- Independent of the concrete integral $I(f)$:

$$e_n \leq n^{-1/2} C(\omega)$$

where $C(\omega)$ is given by

$$C(\omega) = \left( \sup_{\|f\|_{H} \leq 1} \int_{D} \frac{f(x)^2 \varrho(x)^2}{\omega(x)} \, dx \right)^{1/2}$$

- **Consequence:** Importance sampling has worst case error of order $n^{-1/2}$ if

$$C^{\text{imps}} = \inf_{\omega} C(\omega) < \infty$$
Analysis of the error

- Independent of the concrete integral $I(f)$:

$$e_n \leq n^{-1/2} C(\omega)$$

where $C(\omega)$ is given by

$$C(\omega) = \left(\sup_{\|f\|_{H} \leq 1} \int_{D} \frac{f(x)^2 \varrho(x)^2}{\omega(x)} \, dx\right)^{1/2}$$

- **Consequence:** Importance sampling has worst case error of order $n^{-1/2}$ if

$$C^{\text{imps}} = \inf_{\omega} C(\omega) < \infty$$
Known Result (Plaskota, Wasilkowski, Zhao 2009)

- use $|f(t)| \leq \sqrt{K(t, t)}$ for $\|f\| \leq 1$ to obtain

$$C(\omega) \leq \left( \int_D \frac{K(x, x) \varrho^2(x)}{\omega(x)} \, dx \right)^{1/2}$$

- **Standard Monte-Carlo:** $\omega = \varrho$

$$C^{\text{std}} := \left( \int_D K(x, x) \varrho(x) \, dx \right)^{1/2} < \infty$$

sufficient for standard MC to have error of order $n^{-1/2}$

- **Optimization for $\omega$:** with the condition

$$C^{\text{sqrt}} = \int_D \sqrt{K(x, x)} \varrho(x) \, dx < \infty$$

the density

$$\omega^*(x) = \frac{\sqrt{K(x, x)} \varrho(x)}{C^{\text{sqrt}}}$$

gives error of order $n^{-1/2}$
Known Result (Plaskota, Wasilkowski, Zhao 2009)

- use \(|f(t)| \leq \sqrt{K(t,t)}\) for \(\|f\| \leq 1\) to obtain

\[
C(\omega) \leq \left( \int_D \frac{K(x,x)\varrho^2(x)}{\omega(x)} \, dx \right)^{1/2}
\]

- **Standard Monte-Carlo:** \(\omega = \varrho\)

\[
C^{\text{std}} := \left( \int_D K(x,x)\varrho(x) \, dx \right)^{1/2} < \infty
\]

sufficient for standard MC to have error of order \(n^{-1/2}\)

- **Optimization for \(\omega\):** with the condition

\[
C^{\text{sqrt}} = \int_D \sqrt{K(x,x)}\varrho(x) \, dx < \infty
\]

the density

\[
\omega^*(x) = \frac{\sqrt{K(x,x)}\varrho(x)}{C^{\text{sqrt}}}
\]

gives error of order \(n^{-1/2}\)
Known Result (Plaskota, Wasilkowski, Zhao 2009)

- use $|f(t)| \leq \sqrt{K(t,t)}$ for $\|f\| \leq 1$ to obtain

$$C(\omega) \leq \left( \int_D \frac{K(x,x)\varrho^2(x)}{\omega(x)} \, dx \right)^{1/2}$$

- **Standard Monte-Carlo**: $\omega = \varrho$

$$C^{\text{std}} := \left( \int_D K(x,x)\varrho(x) \, dx \right)^{1/2} < \infty$$

sufficient for standard MC to have error of order $n^{-1/2}$

- **Optimization for $\omega$**: with the condition

$$C^{\text{sqrt}} = \int_D \sqrt{K(x,x)}\varrho(x) \, dx < \infty$$

the density

$$\omega^*(x) = \frac{\sqrt{K(x,x)}\varrho(x)}{C^{\text{sqrt}}}$$

gives error of order $n^{-1/2}$
The Result

- $C^{\text{init}} \leq C^{\text{imps}} \leq C^{\text{sqrt}} \leq C^{\text{std}}$
- $C^{\text{std}} < \infty \iff$ Standard MC has error of order $n^{-1/2}$
- $C^{\text{sqrt}} < \infty \iff$ PWZ-importance sampling has error of order $n^{-1/2}$
- $C^{\text{init}} < \infty \iff H \subset L_1(\varrho) \iff$ Problem is well defined $\iff J_H : H \to L_1(\varrho)$ is a bounded operator

\[ C^{\text{imps}} \leq \sqrt{\frac{\pi}{2}} C^{\text{init}} \]

In particular, if the kernel $K$ is nonnegative then $C^{\text{imps}} \leq \sqrt{\frac{\pi}{2}} C^{\text{init}}$. 
The Result

- \( C^{\text{init}} \leq C^{\text{imps}} \leq C^{\sqrt{\text{std}}} \leq C^{\text{std}} \)
- \( C^{\text{std}} < \infty \iff \text{Standard MC has error of order } n^{-1/2} \)
- \( C^{\sqrt{\text{std}}} < \infty \iff \text{PWZ-importance sampling has error of order } n^{-1/2} \)
- \( C^{\text{init}} < \infty \iff H \subset L_1(\varrho) \iff \text{Problem is well defined} \iff J_H : H \to L_1(\varrho) \text{ is a bounded operator} \)
The Result

- \( C^{\text{init}} \leq C^{\text{imps}} \leq C^{\text{sqrt}} \leq C^{\text{std}} \)
- \( C^{\text{std}} < \infty \implies \text{Standard MC has error of order } n^{-1/2} \)
- \( C^{\text{sqrt}} < \infty \implies \text{PWZ-importance sampling has error of order } n^{-1/2} \)
- \( C^{\text{init}} < \infty \iff H \subset L_1(\varrho) \iff \text{Problem is well defined} \iff J_H : H \to L_1(\varrho) \text{ is a bounded operator} \)
The Result

- $C^{\text{init}} \leq C^{\text{imps}} \leq C^{\text{sqrt}} \leq C^{\text{std}}$
- $C^{\text{std}} < \infty \iff$ Standard MC has error of order $n^{-1/2}$
- $C^{\text{sqrt}} < \infty \iff$ PWZ-importance sampling has error of order $n^{-1/2}$
- $C^{\text{init}} < \infty \iff H \subset L_1(\varrho) \iff$ Problem is well defined $\iff J_H : H \to L_1(\varrho)$ is a bounded operator

Aicke Hinrichs  
Optimal Importance Sampling 6 / 14
The Result

- $C^{\text{init}} \leq C^{\text{imps}} \leq C^{\text{sqrt}} \leq C^{\text{std}}$
- $C^{\text{std}} < \infty \iff$ Standard MC has error of order $n^{-1/2}$
- $C^{\text{sqrt}} < \infty \iff$ PWZ-importance sampling has error of order $n^{-1/2}$
- $C^{\text{init}} < \infty \iff H \subset L_1(\varrho) \iff$ Problem is well defined $\iff J_H : H \rightarrow L_1(\varrho)$ is a bounded operator

Theorem

If the initial error is finite or, equivalently, if the embedding $J_H : H \rightarrow L_1(\varrho)$ is a bounded operator then importance sampling has error of order $n^{-1/2}$. More precisely,

$$C^{\text{imps}} \leq \sqrt{\frac{\pi}{2}} \|J_H : H \rightarrow L_1(\varrho)\|.$$

In particular, if the kernel $K$ is nonnegative then

$$C^{\text{imps}} \leq \sqrt{\frac{\pi}{2}} C^{\text{init}}.$$
$1 \leq p < \infty$

- $X, Y$ Banach spaces, $T : X \to Y$ bounded linear operator
- $T$ is called $p$-summing if $T$ maps weakly $p$-summable sequences in $X$ to strongly $p$-summable sequences in $Y$.

\]
Theorem (Rosenthal, Johnson/Schechtman)

$X \subset L_1(\Omega, \mu)$, $\mu$ is a probability measure, $J : X \rightarrow L_1(\mu)$ bounded embedding. If the dual operator $J' : L_\infty(\Omega, \mu) \rightarrow X'$ is $q$-summing for some $1 \leq q < \infty$ then there exists a measurable function $g > 0$ on $\Omega$ such that $\int_\Omega g \, d\mu = 1$ and such that the isometry

$$M : L_1(\Omega, \mu) \rightarrow L_1(\Omega, g \, d\mu) \quad \text{given by} \quad Mf = fg^{-1}$$

maps $X$ to a space $\tilde{X} = M(X)$ which is contained in $L_p(\Omega, g \, d\mu)$, where $p$ is the dual index of $q$ defined as $1/p + 1/q = 1$.

Moreover, if we equip $\tilde{X}$ with the norm from $X$, i.e. if we set

$$\|Mf|\tilde{X}\| = \|f|X\| \quad \text{for} \ f \in X,$$

then the embedding $\tilde{J} : \tilde{X} \rightarrow L_p(\Omega, g \, d\mu)$ has norm

$$\|\tilde{J} : \tilde{X} \rightarrow L_p(\Omega, g \, d\mu)\| \leq \pi_q(J' : L_\infty(\Omega, \mu) \rightarrow X').$$
The Method

- \( C^{\text{init}} < \infty \) means \( H \subset L_1(\varrho) \)
- we want to change the density so that \( H \subset L_2 \)
- recall: \( J_H : H \to L_1(\varrho) \) is a linear bounded operator
- the Little Grothendieck Theorem tells you that the dual operator is 2-summing
- the Change of Density Theorem tells you that then the measure \( \varrho dx \) can be changed with a density so that \( H \) then actually becomes a subspace of \( L_2 \)
- that is exactly what we need
- the density \( \omega \) for the importance sampling algorithm can be obtained from the Pietsch measure in the Pietsch Domination Theorem associated with the 2-summing operator \( J'_H \)
\( C^{\text{init}} < \infty \) means \( H \subset L_1(\varrho) \)

- we want to change the density so that \( H \subset L_2 \)

- recall: \( J_H : H \rightarrow L_1(\varrho) \) is a linear bounded operator

- the Little Grothendieck Theorem tells you that the dual operator is 2-summing

- the Change of Density Theorem tells you that then the measure \( \varrho d x \) can be changed with a density so that \( H \) then actually becomes a subspace of \( L_2 \)

- that is exactly what we need

- the density \( \omega \) for the importance sampling algorithm can be obtained from the Pietsch measure in the Pietsch Domination Theorem associated with the 2-summing operator \( J'_H \)
The Method

- $C^{\text{init}} < \infty$ means $H \subset L_1(\varrho)$

Theorem

Assume that we have a sequence $I_d$ of $d$-dimensional integration problems with normalized initial error. If the embeddings $J_{H_d} : H_d \rightarrow L_1(\rho_d)$ are uniformly bounded, then the multivariate weighted integration problem is strongly polynomially tractable in the randomized setting with exponent 2. This is in particular the case if all the kernels $K_d$ are nonnegative.

- **Novak, Wozniakowski:** The exponent 2 is sharp for tensor product Hilbert spaces whose univariate reproducing kernel is nonnegative and decomposable and univariate integration is not trivial for the two spaces corresponding to decomposable parts.
Theorem

Assume that we have a sequence $I_d$ of $d$-dimensional integration problems with normalized initial error. If the embeddings $J_{H_d} : H_d \rightarrow L_1(\rho_d)$ are uniformly bounded, then the multivariate weighted integration problem is strongly polynomially tractable in the randomized setting with exponent 2. This is in particular the case if all the kernels $K_d$ are nonnegative.

- **Novak, Wozniakowski**: The exponent 2 is sharp for tensor product Hilbert spaces whose univariate reproducing kernel is nonnegative and decomposable and univariate integration is not trivial for the two spaces corresponding to decomposable parts.
Toy Example

- $D = [0, \infty)$
- $K(x, y) = \sum_{j=1}^{\infty} a_j^2 \, 1_j(x) \, 1_j(y)$
- $\varrho(x) = \sum_{j=1}^{\infty} r_j \, 1_j(x)$ for some $r_j \geq 0$ summing to 1
- The functions $a_j 1_j$ are an orthonormal basis of $H$.
- $C^{\text{init}} < \infty \iff (a_j r_j) \in \ell_2$
- $C^{\text{sqrt}} < \infty \iff (a_j r_j) \in \ell_1$
- $C^{\text{std}} < \infty \iff (a_j^2 r_j) \in \ell_1$
- $C^{\text{imps}} < \infty \iff (a_j r_j) \in \ell_2$
- direct construction of the density

$$\omega(x) = (C^{\text{init}})^{-2} \sum_{j=1}^{\infty} a_j^2 r_j^2 \, 1_j(x)$$

leads to $C^{\text{imps}} = C^{\text{init}}$
Toy Example

- \( D = [0, \infty) \)
- \( K(x, y) = \sum_{j=1}^{\infty} a_j^2 \mathbf{1}_j(x) \mathbf{1}_j(y) \)
- \( \varrho(x) = \sum_{j=1}^{\infty} r_j \mathbf{1}_j(x) \) for some \( r_j \geq 0 \) summing to 1
- The functions \( a_j \mathbf{1}_j \) are an orthonormal basis of \( H \).
- \( C^{\text{init}} < \infty \iff (a_j r_j) \in \ell_2 \)
- \( C^{\text{sqrt}} < \infty \iff (a_j r_j) \in \ell_1 \)
- \( C^{\text{std}} < \infty \iff (a_j^2 r_j) \in \ell_1 \)
- \( C^{\text{imps}} < \infty \iff (a_j r_j) \in \ell_2 \)
- Direct construction of the density

\[
\varpi(x) = (C^{\text{init}})^{-2} \sum_{j=1}^{\infty} a_j^2 r_j^2 \mathbf{1}_j(x)
\]

leads to \( C^{\text{imps}} = C^{\text{init}} \)
Toy Example

- \( D = [0, \infty) \)
- \( K(x, y) = \sum_{j=1}^{\infty} a_j^2 1_j(x) 1_j(y) \)
- \( \varrho(x) = \sum_{j=1}^{\infty} r_j 1_j(x) \) for some \( r_j \geq 0 \) summing to 1
- The functions \( a_j 1_j \) are an orthonormal basis of \( H \).
- \( C^{\text{init}} < \infty \iff (a_j r_j) \in \ell_2 \)
- \( C^{\text{sqr}} < \infty \iff (a_j r_j) \in \ell_1 \)
- \( C^{\text{std}} < \infty \iff (a_j^2 r_j) \in \ell_1 \)
- \( C^{\text{imps}} < \infty \iff (a_j r_j) \in \ell_2 \)
- Direct construction of the density leads to \( C^{\text{imps}} = C^{\text{init}} \)

\[ \omega(x) = (C^{\text{init}})^{-2} \sum_{j=1}^{\infty} a_j^2 r_j^2 1_j(x) \]
Toy Example

- \( D = [0, \infty) \)
- \( K(x, y) = \sum_{j=1}^{\infty} a_j^2 1_j(x) 1_j(y) \)
- \( \varrho(x) = \sum_{j=1}^{\infty} r_j 1_j(x) \) for some \( r_j \geq 0 \) summing to 1
- The functions \( a_j 1_j \) are an orthonormal basis of \( H \).

- \( C^{\text{init}} < \infty \iff (a_j r_j) \in \ell_2 \)
- \( C^{\text{sqrt}} < \infty \iff (a_j r_j) \in \ell_1 \)
- \( C^{\text{std}} < \infty \iff (a_j^2 r_j) \in \ell_1 \)
- \( C^{\text{imps}} < \infty \iff (a_j r_j) \in \ell_2 \)
- Direct construction of the density

\[
\omega(x) = (C^{\text{init}})^{-2} \sum_{j=1}^{\infty} a_j^2 r_j^2 1_j(x)
\]

leads to \( C^{\text{imps}} = C^{\text{init}} \)
Toy Example

- \( D = [0, \infty) \)
- \( K(x, y) = \sum_{j=1}^{\infty} a_j^2 \mathbf{1}_j(x) \mathbf{1}_j(y) \)
- \( \varrho(x) = \sum_{j=1}^{\infty} r_j \mathbf{1}_j(x) \) for some \( r_j \geq 0 \) summing to 1
- The functions \( a_j \mathbf{1}_j \) are an orthonormal basis of \( H \).
- \( C^{\text{init}} < \infty \iff (a_j r_j) \in \ell_2 \)
- \( C^{\text{sqr}} < \infty \iff (a_j r_j) \in \ell_1 \)
- \( C^{\text{std}} < \infty \iff (a_j^2 r_j) \in \ell_1 \)
- \( C^{\text{imps}} < \infty \iff (a_j r_j) \in \ell_2 \)
- Direct construction of the density

\[
\omega(x) = (C^{\text{init}})^{-2} \sum_{j=1}^{\infty} a_j^2 r_j^2 \mathbf{1}_j(x)
\]

leads to \( C^{\text{imps}} = C^{\text{init}} \).
Tox Example

- $D = [0, \infty)$
- $K(x, y) = \sum_{j=1}^{\infty} a_{j}^{2} \mathbf{1}_{j}(x) \mathbf{1}_{j}(y)$
- $\varrho(x) = \sum_{j=1}^{\infty} r_{j} \mathbf{1}_{j}(x)$ for some $r_{j} \geq 0$ summing to 1
- The functions $a_{j}\mathbf{1}_{j}$ are an orthonormal basis of $H$.
- $C^{\text{init}} < \infty \iff (a_{j}r_{j}) \in \ell_{2}$
- $C^{\text{sqrt}} < \infty \iff (a_{j}r_{j}) \in \ell_{1}$
- $C^{\text{std}} < \infty \iff (a_{j}^{2}r_{j}) \in \ell_{1}$
- $C^{\text{imps}} < \infty \iff (a_{j}r_{j}) \in \ell_{2}$
- direct construction of the density

$$\omega(x) = (C^{\text{init}})^{-2} \sum_{j=1}^{\infty} a_{j}^{2}r_{j}^{2} \mathbf{1}_{j}(x)$$

leads to $C^{\text{imps}} = C^{\text{init}}$. 
Toy Example

- $D = [0, \infty)$
- $K(x, y) = \sum_{j=1}^{\infty} a_j^2 \mathbf{1}_j(x) \mathbf{1}_j(y)$
- $\varrho(x) = \sum_{j=1}^{\infty} r_j \mathbf{1}_j(x)$ for some $r_j \geq 0$ summing to 1
- The functions $a_j \mathbf{1}_j$ are an orthonormal basis of $H.$
- $C^{\text{init}} < \infty \iff (a_j r_j) \in \ell_2$
- $C^{\text{sqrt}} < \infty \iff (a_j r_j) \in \ell_1$
- $C^{\text{std}} < \infty \iff (a_j^2 r_j) \in \ell_1$
- $C^{\text{imps}} < \infty \iff (a_j r_j) \in \ell_2$
- direct construction of the density

$$\omega(x) = (C^{\text{init}})^{-2} \sum_{j=1}^{\infty} a_j^2 r_j^2 \mathbf{1}_j(x)$$

leads to $C^{\text{imps}} = C^{\text{init}}$
Toy Example

- $D = [0, \infty)$
- $K(x, y) = \sum_{j=1}^{\infty} a_j^2 \mathbf{1}_j(x) \mathbf{1}_j(y)$
- $\varrho(x) = \sum_{j=1}^{\infty} r_j \mathbf{1}_j(x)$ for some $r_j \geq 0$ summing to 1
- The functions $a_j \mathbf{1}_j$ are an orthonormal basis of $H$.

- $C^{\text{init}} < \infty \iff (a_j r_j) \in \ell_2$
